## Cell Phone Lockers

Savy Design's Cell Phone Lockers are made from durable stainless steel, and have been designed to be both cost effective and aesthetically pleasing.

### Uses:

These units have front-opening doors and are designed to be bolted to a wall. They are *not* designed to be rain proof and are intended for areas that are protected from rainfall.

### Locks:

Camlocks are fitted to all boxes, each supplied with 2 keys. In the event of missing keys, new locks can be sourced locally. The camlocks are available with up to 999 different keys.

### Box Numbering:

The box numbers are typically laser-cut into stainless steel tags which are attached to the doors.

### Materials:

Our Cell Phone Boxes are fabricated from brushed stainless steel, and are available in the following grades:

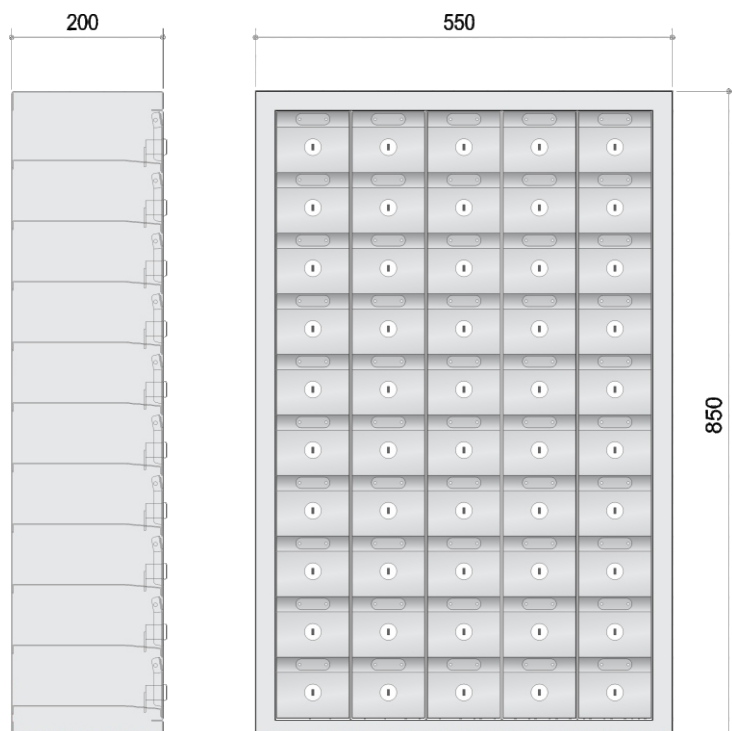

- Grade 304 for outdoor applications (must be rain protected)
- Grade 430 for internal use.

### Construction:

The lockers are fabricated from 1.2mm sheet. The doors are shaped in a manner that stiffens them for maximum rigidity, and are bolted into position. They open upwards and fall to the closed position which is beneficial from both a safety and aesthetic perspective.

### Security:

These units are lockers, rather than safes. They are not designed for high security, so should be positioned in a suitably secure location.

### Dimensions:

Our Cell Phone Lockers are typically supplied in units of 50 boxes, dimensioned as shown.

Units of other quantities are available on request.

The internal box dimensions are 174mm deep x 99mm wide.
