

Regent Bulk Letterbox Units

Savy Design's **Regent** range of stainless steel letterboxes are intended to be an architectural enhancement for any building.

Uses:

These units have front-opening doors and are designed to be bolted to a wall.

They are intended for both indoor and outdoors use.

Locks:

Camlocks are fitted to all boxes, each supplied with 2 keys. In the event of missing keys, new locks can be sourced locally.

Box Numbering:

The box numbers are typically laser-cut into the doors, with a black acrylic panel behind the cut away area. This is a permanent method of numbering the boxes which cannot be removed or tampered with.

Materials:

The Regent range is fabricated from brushed stainless steel and is available in the following grades:

- Grade 316 for external applications in coastal areas
- Grade 304 for internal or inland applications
- Grade 430 for internal use
- Powder coated grade 3Cr12 if a colour is required .

Alternatively combinations of these grades can be used to optimise costs.

Construction:

The door hinges are welded in position making the doors virtually indestructible. The doors open upwards and fall to the closed position which is beneficial from both a safety and aesthetic perspective. These units are assembled using a combination of bolting and welding, making them extremely robust.

Weather Proofing:

These units are designed to protect against all but the worst weather conditions. The angle of entry for rainfall is 45 degrees. Any moisture that is able to penetrate can exit through built-in drainage channels.

Narrow and deep (350mm front to back):

Wide and shallow (250mm front to back):

Dimensions:

We use the EU Letterbox Standard as a guideline for our letterbox dimensions. This requires that a C4-sized envelope (229 x 324mm) be inserted without bending.

Resulting are two typical sets of dimensions, and which to use depends on available space.

We can also customise these dimensions as required.
