## Vermont Bulk Letterbox Units

Savy Design's **Vermont** range of stainless steel letterboxes have been designed to be *cost effective* and *aesthetically pleasing*.

### Uses:

These units have front-opening doors and are designed to be bolted to a wall.

They are *not* designed to be rain proof and are intended for areas that are protected from rainfall.

### Locks:

Camlocks are fitted to all boxes, each supplied with 2 keys. In the event of missing keys, new locks can be sourced locally.

### Box Numbering:

The box numbers are typically laser-cut into the doors, with a black acrylic panel behind the cut away area. This is a permanent method of numbering the boxes which cannot be removed or tampered with.

### Materials:

The Vermont range is fabricated from brushed stainless steel and is available in the following grades:

- Grade 316 for external applications in coastal areas
- Grade 304 for internal or inland applications
- Grade 430 for internal use.

Alternatively combinations of these grades can be used to optimise costs.

### Construction:

The doors are fabricated from plate and shaped in a manner that stiffens them for maximum rigidity. They open upwards and fall to the closed position which is beneficial from both a safety and aesthetic perspective. These units are assembled using a combination of bolting and welding, making them extremely robust.

### Weather Proofing:

These units are not designed to be weatherproof and should be used only in areas that are protected against rainfall

Narrow and deep (350mm front to back):

Wide and shallow (250mm front to back):

### Dimensions:

All Savy Design's bulk letterbox units use the EU Letterbox Standard as a guideline for our letterbox dimensions. This requires that a C4-sized envelope (229 x 324mm) be inserted without bending.

Resulting are two typical sets of dimensions, and which to use depends on available space.
